

2D. Interactive Program

Title: Find the Creeps!

- Use the mouse to locate 5 hidden, scary faces in a fully dark environment
- The mouse ~~can~~ make a spotlight of particles or noise that is overlaid onto the faces
- Maybe the mouse could activate the spotlight when M1 is clicked
- The faces are randomly scattered around the window
- Preferably, the window should be big, maybe fit the size of the screen

A fully black window.
The circle around the
mouse is where the
noise generates.
